

▼ Optima Batteries

The **SPIRALCELL**[®] Technology in an OPTIMA is the most advanced form of lead-acid battery technology on the market today. This patented technology is designed to be leak-proof, vibration resistant and maintenance-free while providing customers with more starting power and a longer cycle life. SPIRALCELL Technology makes OPTIMA batteries uniquely capable of solving many of the issues that fishermen face with batteries on a regular basis.

OPTIMA BlueTop marine batteries are available in a Group 34 starting battery, Group 34 deep cycle battery and a larger Group 31 deep cycle battery. They are designed for those boaters and fishermen with electric trolling motors, onboard electronics, stereo systems or those who simply need a sure-starting, strong cranking, maintenance free battery.
