

BIG PUNCH, SMALL PACKAGE

OPTIMA Batteries has developed a lightweight power-packed battery that exceeds the performance expectations of such a compact package.

OPTIMA Batteries introduced the D51 and D51R (2.7 liter/B24) YellowTop batteries for performance duty.

In addition to being leak-proof, 15-times more vibration resistant and maintenance-free, SPIRALCELL construction also provides a higher level of power output over a longer period of time. This longer deep cycle life and greater starting power give OPTIMA Batteries like the 51 and 51R their distinct advantage.
